

ROSS Module Summary

Incident Resources

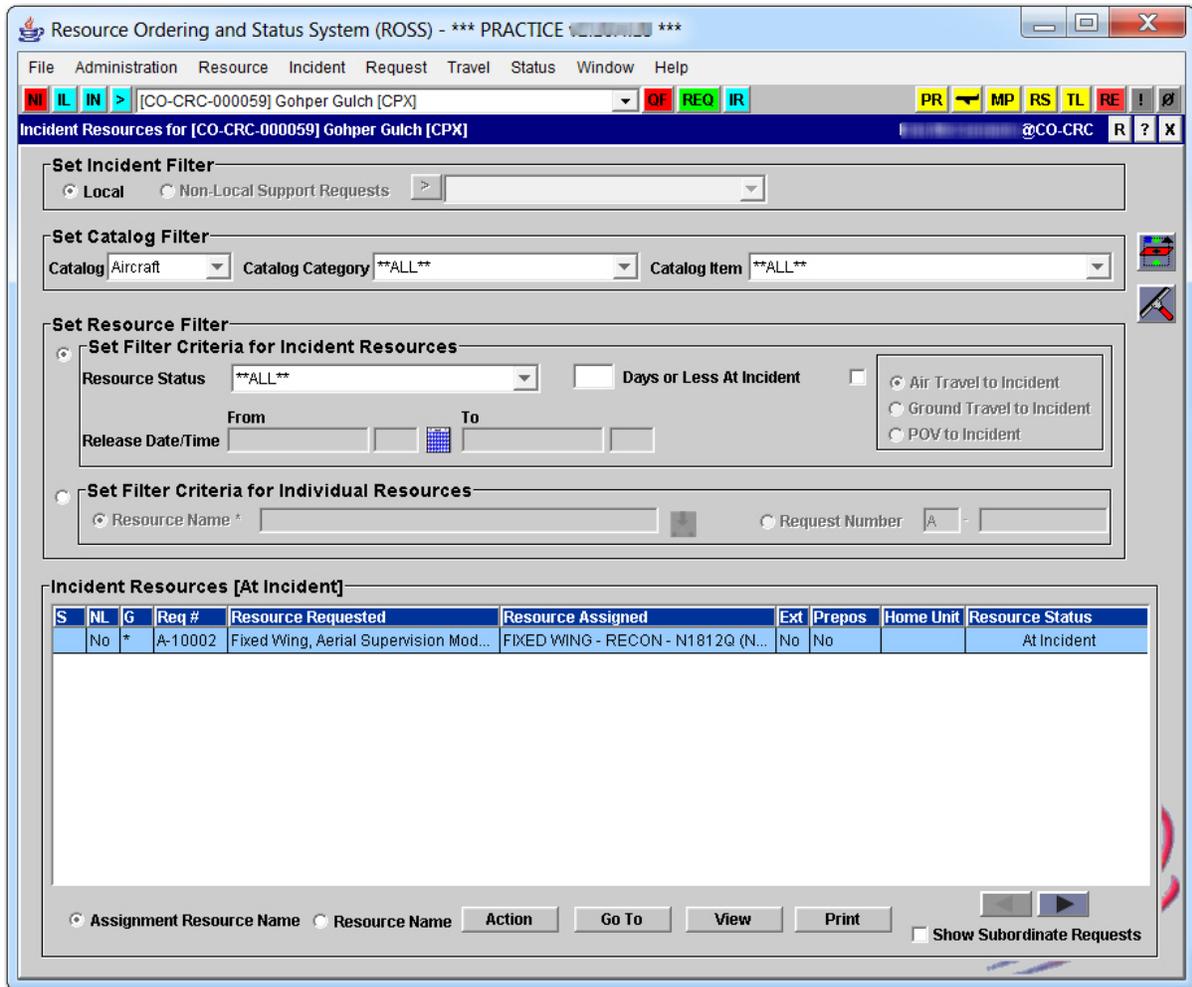

Figure 1. Incident Resources screen

Description

The Incident Resources module allows a dispatcher to view or take action on resources assigned to local incidents. Local incidents may be selected from the Most Recent Incidents drop-down list. The Incident List module allows the user to add incidents to the Most Recent Incidents. Figure 1 shows the ROSS screen associated with the Incident Resources module.

Incident resources must be filtered based on the catalog(s) of the currently assigned resources. Services resources must also be filtered by catalog category and catalog item. Resources may also be filtered by status, days at incident, mobilization travel method, and/or release date range. Alternatively, an individual resource may be selected by filtering on resource name or

Incident Resources

request number. After filtering, ROSS displays request number, resource requested, resource assigned, home unit, and Mob ETD information for the selected resources.

Dispatchers may release or tentatively release resources from a local incident when the resource status is Mob in Route, At Incident, or Returned from Assignment. Additionally, dispatchers may reassign local incident resources to a local or non-local incident when the resource status is Mob in Route, At Incident, Tentative Release, Released, Demob in Route, or Returned from Assignment.

As shown in Figure 2, a dispatcher may reassign multiple resources from one local incident to another in one step. These requests are created and the resources reassigned at the same time. Dispatch Managers may also utilize Quick Fill Reassign to reassign multiple resources to a non-local incident, but only after a Dispatch Manager at the non-local office has authorized the reassignment. *Refer to the Incident Module Summary for more information.*

Reassign Resource

Current Request: A-10002 Agency: _____
Requested Item: Fixed Wing, Aerial Supervision Module Contract: _____
Resource Assigned: FIXED WING - RECON - N1812Q (N1812Q)

Pending Requests Quick Fill Reassignment

Select Resource Criteria for Reassignment

Assign by Qualification Fixed Wing, Aerial Supervision Module
 Assign by Catalog Item _____ (For Overhead Use Only)

Select Incident for Reassignment

Local Incidents Non-Local Incidents

Incident Name: _____ Host Unit ID: _____
Incident #: _____ - _____ - _____

Incident #	Location

Incident # Incident Name

Documentation: _____

ROSS Module Summary

Incident Resources

To Quick Fill Reassign multiple resources from one local incident to another, resources are selected from the source incident on the Incident Resources screen, and then Reassign + is selected from the Action button. By default, the Local Incidents button is selected on the Reassign Resource/Service dialog box. Users select the appropriate destination incident. The resources are reassigned and set At Incident.

The Incident Resources module is related to Resource Item, Resource Status, Incident, Pending Request, Request Status, and Travel modules.

Data Information

Data Element	Data Definition
Incident Toolbar	The incident context of the Incident Resources module is chosen from the 'Most Recent Incidents' drop-down list.
Set Catalog Filter	Filter for viewing specific incident resources by Catalog, such as Aircraft; Catalog Category, such as Helicopter; and Catalog Item, such as Type 2 Standard. Category and Item must be specified when filtering Services. Only relevant choices are displayed.
Set Filter Criteria for Incident Resources (cannot be used with Filter Criteria for Individual Resources)	Filters for viewing specific incident resources. Options include Resource Status, Days or Less at Incident (includes Returned from Assignment but not yet statused), Mobilization travel method, such as air, ground, or POV, and Release Date/Time window.
Set filter for Individual Resources (cannot be used with Filter Criteria for Incident Resources)	Filter for viewing an individual incident resource using either the resource name or the request number, wildcard permitted.
Incident Resources grid	Grid that displays request number, resource requested, resource assigned, external indicator, home unit, mob ETD, release to information for the filtered resources, preposition indicator, non-local resource indicator, and group indicator.
Action button	Actions that can be taken on one or more highlighted resources. Actions include Release, Reassign, Edit Release, Edit Request, Edit Assignment, Add Documentation, Add Subordinate Request, and Create Support Request.

ROSS Module Summary

Incident Resources

Data Element	Data Definition
<i>View button</i>	User may view Incident, Request, Resource, Filling Unit, Home Dispatch Unit, Requesting Unit or Associated Requests, such as support or subordinate requests.
<i>Print button</i>	Prints a Resource Order facsimile for selected resource(s).
<i>Arrow buttons</i>	Used when all the data in the grid cannot be displayed on the screen at one time. In this case, displays the “release to” information.
<i>Show Subordinate Requests check box</i>	Check box used to display subordinate requests for a selected resource that has a configuration, such as CRWB, FFT1s, and FFT2s for a crew. Action may then be taken on one or more subordinate requests without affecting the parent or other subordinates, such as releasing one crewmember.
