Description

Dispatch Centers use the Resource Status module to view and maintain the status of the resources they dispatch, including pre-positioned resources.

The module allows a dispatch center to update the status of unassigned resources to available or unavailable and to set the area of availability to GACC, local, or national. Unavailability periods may be created or edited. The search function can be used to find a resource by name or to display resources that have a given qualification or classification (e.g., DIVS or Type 6 Engine).

To facilitate statusing of unassigned resources ROSS offers the user with many filtering options. The only required filter is resource type, such as aircraft, crews, or equipment. Additional filters include resource provider, vendor, and current status. The filtered resources may be displayed

ROSS Module Summary

Resource Status

by provider, home unit or owner. Dispatchers may set the status and the area of availability of one or more resources at a time.

Filtering by incident and a status to view of 'assigned' allows Dispatchers to quickly determine the location and status of resources on incidents. Very specific questions can be answered such as which assigned overhead resources have a status of tentative release, released, or demob-in-route. When the ETA of a released resource has passed, ROSS sets the status to Returned from Assignment.

ROSS users with the role of Dispatcher or Resource Status utilize this module to view and update resource status. Basic Users can view status information via the Reports module.

This module is related to User Accounts, Organization, Resource Item, Pending Request, Request Status, and Reports modules.

Data Information

Data Element	Data Definition
Resource Type	The ROSS catalog group, such as aircraft, crews, or equipment. <i>Required filter.</i>
Non-Qualified Resources Only <i>check box</i>	When checked, will filter for resources with either no qualification, classification, or equipment type.
Select Provider	A filter for an organization that provides resources, such as TN-CNF. The CWN/Agreement option filters for contracted resources. Default is All.
Select Vendor	A filter for the current dispatch center's vendor-owned resources. Default is All.
Select Incident	A filter for the current dispatch center's resources that are assigned to a particular incident. Default is All.
Status to View	A filter that displays the current dispatch center's resources that match the selected value, such as Available. The choice of Assigned includes additional filters, such as mob-in-route, at incident, or tentative release.
Set Availability+ <i>button</i>	Used to set the availability of one or more resources to available or unavailable.

ROSS Module Summary

Resource Status

Data Element	Data Definition
Set 'Available To'+ <i>button</i>	Used to set the area to which one or more resources are available. Choices are GACC, National, or Local.
Set Unavailability Periods <i>button</i>	A user-created date range when ROSS will set the resource status to Unavailable. A reason may be selected, such as vacation.
