

NAP Version 1.3.4 Release Notes

This is a synopsis of the new and corrected functionality included in NAP version 1.3.4. The primary objective for this release is to add several improvements to NAP.

Installation

No user action is required.

New or Changed Functionality

- Support for application roles has been added. Roles can be added at the application level, and assigned to users for each instance of an application. Additionally, the roles can be maintained by a NAP administrator or from the application via web service calls.
- Integration with Citrix has been added, to automatically synchronize user accounts in Citrix with ROSS user accounts. This means that users will be able to login to Citrix with their same username and password as ROSS, without having to maintain an account in each system. This functionality will not be available upon the initial deployment of 1.3.4, and will be enabled after connectivity between NAP and Citrix is established.

Reports Changes

- None

Additional Change Requests and Defects Fixed in this Version

- Improvements have been made to address 508 compliance issues.
- E-mails sent to account verifiers now include additional information to assist them.
- A fix was made for an intermittent issue that causes a new account to be only partially created.
- Corrected an error in the authentication web service when authenticating a user that doesn't exist.
