

ICBS Business Release Notes BR 1.3.0.5 4/23/2012

BR 1.3.0.5 is scheduled to be deployed into production on **4/23/2012**

Change Request/Bug Fixes

Below are the modules and changes that are scheduled to be implemented in this release. There are a total of 2CR's and one ROSS/ICBS interface bug fix in this release.

ROSS/ICBS Interface

1. **Bug fix for ICBS-ROSS Interface Issue # 64** - On ICBS-initiated orders in which no default financial code has been designated in ROSS, the interface was preventing ICBS from sending the create/fill message to ROSS. It was also preventing any further orders to be processed against the incident.

A change is being made to ICBS to some Java and XSL files in ICBS. A corresponding change is being made to ROSS to allow it to accept the financial code (that the ICBS user defines for the incident) in an ICBS fill message. This financial code will be accepted by ROSS, but not as the ROSS default financial code. ROSS users will continue to be responsible for designating which financial codes are shown as "default" in ROSS.

A change to the ROSS application (v. 2.15) is being deployed on 4/24 in conjunction with this ICBS change.

Other:

1. **CR 293** – This puts in place a purging schedule for audit data. Any audit data older than 3 years will be purged for the following audits:
 - Inventory Audit
 - Item Audit
 - Organization audit
