

FIRE DANGER -- West FDRA

Maximum, Average, and 90th Percentile, based on 15 years data

Fire Danger Area:

- ◆ KDF, LBL
- ◆ NWS- LMK, PAH
- ◆ West RAWs SIG
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

- EXTREME** -- Use extreme caution
- (Caution)** -- Watch for change
- Moderate** -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2000 - 2014

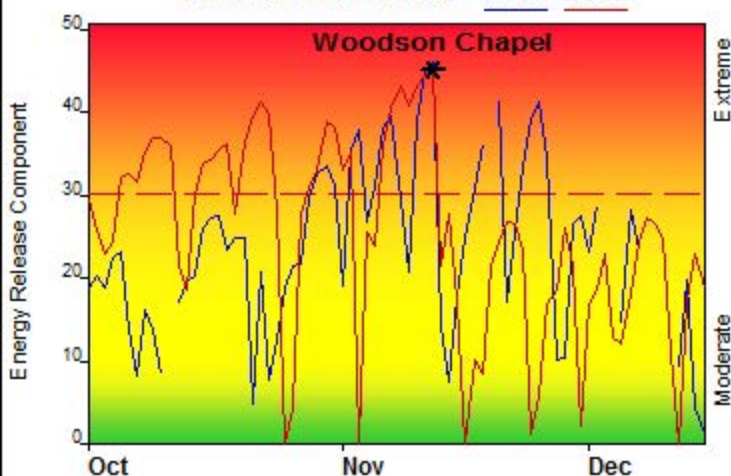

Average -- shows peak fire season over 15 years (1131 observations)

90th Percentile -- Only 10% of the 1131 days from 2000 - 2014 had an Energy Release Component above 30

Local Thresholds - Watch out:

- Combinations of any of these factors can greatly increase fire behavior:
- 20' Wind Speed over 15 mph, RH less than 25%, Temperature over 90, 100-Hour Fuel Moisture less than 13

Years to Remember: 2005 2010

Fuel Model: E - Hardwood Litter (Winter)

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

Frontal passages are a primary factor influencing extreme fire behavior. High winds and low humidity levels can be expected due to topographical exposure.

Around LBL - Lake effect winds are not predicted, and have significant influence on fire behavior and extensive recreation on LBL will add significant complexity to control efforts. Chestnut Oak species on ridgetops exhibit extreme fire behavior.

Stay alert for snags. KDF firefighter Don Lam died from injuries sustained by a snag on the Scotts Chapel Road fire on 9/7/2010

Responsible Agency: KY Interagency Fire Danger Team
FF+4.1 build 1622 03/13/2017-23:28 (C:\Users\ejbunz\endahl\Docum...Kentucky_Complete)
