BR 1.5.0-HF1 is scheduled to be deployed in production on 03/20/2018

<u>**Change Request/Bug Fixes**</u>

Below is the description of the change that is scheduled to be implemented in this release.

Scan gun

1. **CR2710 - Receiving errors when trying to complete Putaway Tasks for Trackable items (components) not kitted.**
   After receiving the cache-to-cache transfer, if the receiving item is a trackable item (not kits) and is of multiple quantity, the putaway tasks are created individually for each trackable id. These individual putaway tasks does not display the suggested trackable id on the serial entry screen.

   After the changes in this CR are deployed, the Suggested trackable id will be displayed on the 'Serial Entry' screen.
