ICBS Business Release Notes
BR 1.1
6/19/2008

ICBS
Interagency Cache Business System

RE-ENGINEERED FOR THE FUTURE

Overview
This list does not include <u>all</u> the fixes; just the ones we think are most relevant to the end-users right now.

1. **Problem:** Any item with a standard pack value over 6 characters long was causing a problem while adding it to an Inbound Order.
   Solution: Field has been extended to 12 characters.

2. **Problem:** On the Create NWCG Customer screen, many values for Agency and Department were missing from the dropdowns.
   Solution: These values have been added to the Agency and Department dropdowns.

3. **Problem:** After adjusting out a trackable item, the status of the Trackable Inventory List was not being updated correctly.
   Solution: Now after adjusting out a trackable item, the status is updated to Not Available.

4. **Problem:** User could not modify Incident details
   Solution: User can modify Incident details.

5. **Problem:** User could only create work order for one trackable kit at a time due to misprinted labels and erroneous billing transaction calculations.
   Solution: These errors have been fixed, so users can now process kitting for multiple trackable kits on one work order.

6. **Problem:** Open WO Report was missing comments column
   Solution: Column has been added for manual entry of comments.

7. **Problem:** Trackable Inventory Adjustment Report did not allow user to select a specific document number to run the report by.
   Solution: Report prompt page now has a option to select Document No.

8. **Problem:** Task Console default view was By Task Type, and user has to select "By Reference" to search for document numbers.
   Solution: Default view for Task Console is now "By Reference".
