

BR 1.4.5-HF1 is scheduled to be deployed into production on 04/05/2017

Change Request/Bug Fixes

Below are the changes that are scheduled to be implemented in this release. There are a total of 3 change requests in this release.

Cognos Reporting

- 1. CR2310 - ORNWK: Date last tested added to Trackable Inventory Status Report.** Request was to replace the column “Sys No” with “Date Last tested” in the Trackable inventory status report.
 This CR adds the “date last tested” to the Trackable inventory status report.

ROSS – ICBS Interface

- 1. CR2172 - ICBS-ROSS Interface - Incident Number Change.**
 The original design based on the ROSS incident rules was that if an incident was changed to new incident, then again changed back to original incident and an incident issue was created and shipped that should send an update message back to ROSS with the original incident but the system sent with new incident. A change has been made in ICBS to allow this scenario – Incident A changed to Incident B (does not exist previously in the system, so we create a new) and incident B changed Back to A and the issue is created against A then system sends a message to ROSS with incident “A” only.

User Group(s)/permissions

- 1. CR2313 – Adding access to User Group permissions.**
 Request was to provide the permissions to the user groups, as mentioned in the below table.

User Group	Required Permission
NWCG_Procurement_Spvr	Create and search supplier item and inbound order
NWCG_Shipping_Supervisor	Outbound (outbound shipment console)
NWCG_Supply_Supervisor	Create work order, Launch WMS/NISCC reports
NWCG_Supply_Tech	Create other issue, Print SKU and location labels.

This CR gives the requested permissions to the user groups that are mentioned in the table above and users in those user groups will be able to access the screens and use the functionality from start to finish.
