

RELEASE NOTES

Please note the following hotfixes that were deployed to IROC Production this morning July 13:

Requests:

- Removed ability for users to create requests against Non-Local Incidents. Users can only create non-local incident requests on assignment rosters and support requests for resources that they filled.
- Removed ability to cancel a release of an ID-FCK frequency. If a dispatcher accidentally releases an ID-FCK frequency they will have to create a new request, place through the system and contact NIICD. NIICD will assign the released frequency to the new request.

Misc:

- Removed “Set Available Admin” button for Dispatcher and Dispatch Manager roles.
