

# RELEASE NOTES

---

IRWIN v7.1 is scheduled to deploy at 2300 MDT this evening, March 21, 2022. IROC will not be offline during the v7.1 deployment. The IRWIN Integration will be turned off for IRWIN v7.1 deployment therefore incidents coming in from the CAD's or the other IRWIN Integrated systems (ERS, FireCode, ICS209, IFM, INFORM, WIRES, WFDSS, etc) will not occur. IROC will be up and operational during the IRWIN deployment. However, incidents created in the other integrated systems do not need to be created in IROC, this will cause a duplicate. IRWIN will be caching the incidents during the deployment and will import those records when v7.1 is operational around March 22, 2022 0300 MDT.

## Changes to IROC with V7.1 deployment:

- Request Capability Needed by Date/Time data element will import/export to IRWIN.
  - This is a required field and must be on or after the Incident Fire Discovery Date/Time.
- IROC will import request documentation via IRWIN for CAD end result Cancel and Cancel UTF requests.
- IRWIN updating Aircraft Tail Numbers to accept values between 4 and 12 characters.
  - UAS/Military aircraft can be entered into IROC with entire registration number and get IRWIN IDs now.
- Incident Types updated to NWCG Incident Event Kind & Event Categories Standard
- To see them go to the following site:
  - <https://www.nwcg.gov/sites/default/files/data-standards/stds/values.pdf>.
