

## Finding and Modifying Protecting Unit of an Incident

Information related to an incident can be found in the IROC Portal. Navigate to the Incidents work area and double-click on an incident in list view to see the details in accordion view. Click on the **Organization** tab to see the incident's protecting unit.

**Note:** Click on a tab header to expand or collapse that tab.

This **Organization** tab shows organizations associated with an incident: Protecting Unit, Billing Agency, Local Incident Identifier, Default Cache, and Dispatch Center. By clicking on **Edit Form**, you can modify any of this information, except the **Dispatch** field.

**Notes:**

- If you change the **Protecting Unit** field, the incident number will change.
- The *protecting unit* was formerly referred to as the *incident host unit*.
