

## e-ISuite Site Now Uses Port 59123 as the Default Port

### Background:

Previously, e-ISuite Site was configured to accept incoming HTTP Requests on Port 80, but some agencies (e.g. Forest Service) instituted a firewall policy change that **blocks** the use of Port 80 on their networks. Also, some computers (agency and personal) may be running one or more applications (such as IIS, Internet Information Services) that are **using port 80**, causing a 404 error when e-ISuite Site tried to connect through the default Port 80.

### Solution:

e-ISuite Site Version 1.2.2 has been modified so that the Default Port is Port 59123. Below are the URL requirements for e-ISuite Site.

**Server Machine: The Launch e-ISuite Site icon now points the user to the following URL:**

<http://localhost:59123/isuite/fx/welcome.html#>

**Client Machines:** To access e-ISuite from client machine the user must specify their Server IP Address followed by :59123 in their URL as follows:

<http://serveripaddress:59123/isuite/fx/welcome.html>
